COMPANY PROFILE

2026
AXIOM SYSTEMS

AXIOM MOTION SYSTEMS

Advanced Motion & **Intelligent** Infrastructure Engineering

Capability Statement

AXIOM Motion Systems specializes in the design, engineering, and delivery of high-performance kinetic infrastructure, precision automation, and intelligent motion environments.

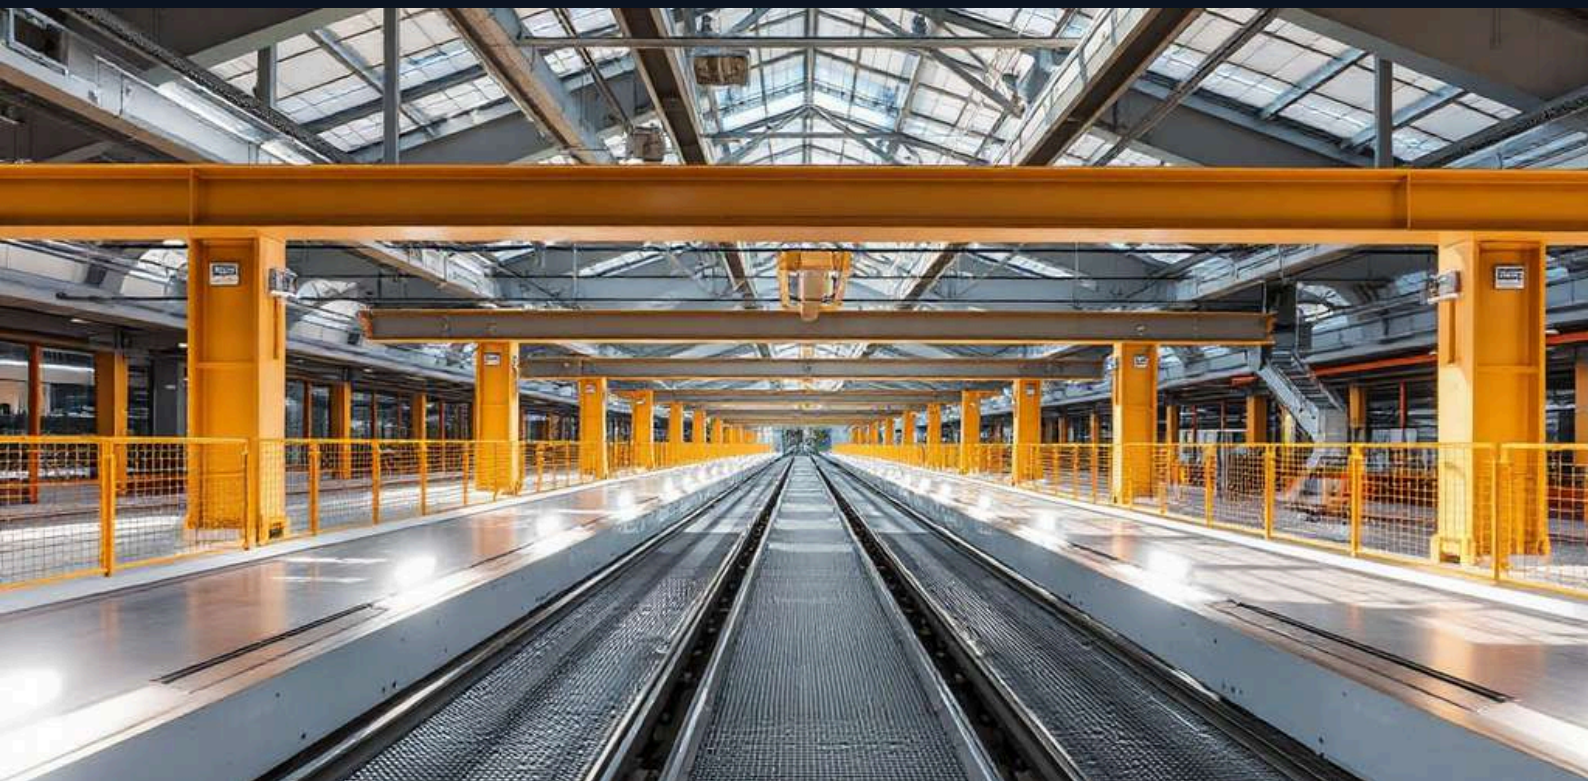

Company Profile

AXIOM Motion Systems designs and delivers advanced motion, automation and infrastructure systems for complex architectural, public and operational environments. AXIOM combines mechanical engineering, controls integration, software systems and operational design into a unified delivery model.

Market Position

AXIOM operates at the intersection of motion engineering, kinetic architecture, intelligent infrastructure and integrated control systems. We focus on environments where reliability, safety and operator experience are critical.

Core Capabilities

AXIOM Motion Systems designs and delivers advanced kinetic infrastructure, precision automation, and intelligent motion environments.

Capabilities include:

- Motion Systems
- Kinetic Infrastructure
- Intelligent Control
- Special Projects
- Safety Systems
- Operator Environments
- Lifecycle Support

Motion Systems

Synchronised motion, lifting systems, automated positioning environments and high-consequence engineered movement systems.

Kinetic Infrastructure

Responsive architectural systems, deployable environments, retractable structures and dynamic public-space infrastructure.

Intelligent Control

Integrated control systems, operator environments, safety systems, remote monitoring and infrastructure automation.

Featured System: Industrial Robotic Crane

Custom-engineered robotic crane integrating automated motion control, precision positioning, operator systems and industrial safety environments.

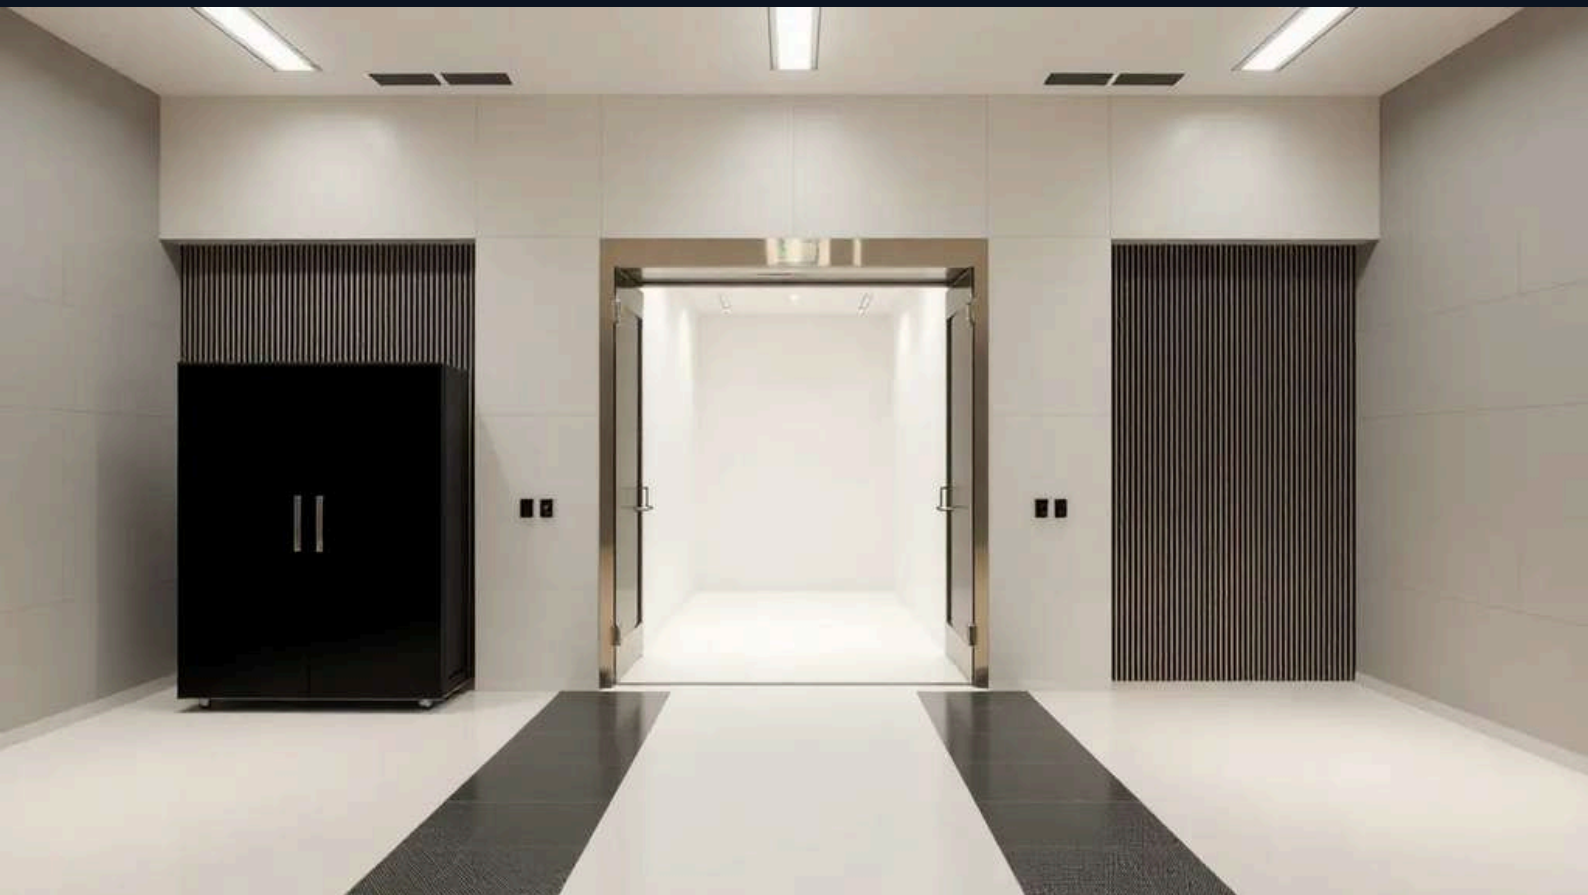

Featured System: Deployable Architectural Screen

Integrated motorised facade environment designed to transform architectural interaction through controlled deployment, automation and precision mechanical integration.

Featured System: Automated Acoustic Doors

Specialised motion and acoustic isolation system integrating automated movement, environmental performance and operator-driven control.

Concept Systems

- Transformable Venue Environments
- Kinetic Public Infrastructure
- Intelligent Acoustic Systems
- Adaptive Architectural Interfaces
- Integrated Venue Operations Platforms

Why AXIOM

Integrated Engineering. Infrastructure Reliability. Intelligent Operation. AXIOM is engineered for high-consequence environments and future-ready infrastructure.
